

Employee Collection (MongoDB)

// 1. Insert documents

```
db.employee.insertMany([
  { "_id": 1, "name": "Riya", "department": "IT", "salary": 50000, "city": "Pune" },
  { "_id": 2, "name": "Aarav", "department": "HR", "salary": 45000, "city": "Mumbai" },
  { "_id": 3, "name": "Neha", "department": "Finance", "salary": 60000, "city": "Nashik" },
  { "_id": 4, "name": "Karan", "department": "IT", "salary": 55000, "city": "Pune" },
  { "_id": 5, "name": "Tina", "department": "Admin", "salary": 40000, "city": "Nagpur" }
]);
```

// 2. Display all records

```
db.employee.find().pretty();
```

// 3. Find employees who belong to the IT department

```
db.employee.find({ department: "IT" });
```

// 4. Display employees whose salary is greater than 45000

```
db.employee.find({ salary: { $gt: 45000 } });
```

// 5. Retrieve employees living in Pune or Mumbai using \$or

```
db.employee.find({ $or: [ { city: "Pune" }, { city: "Mumbai" } ] });
```

// 6. Display employees whose salary is between 40000 and 60000 using \$and

```
db.employee.find({ $and: [ { salary: { $gte: 40000 } }, { salary: { $lte: 60000 } } ] });
```

// 7. Find employees whose department is not HR

```
db.employee.find({ department: { $ne: "HR" } });
```

// 8. Update salary of employee named "Tina" to 42000

```
db.employee.updateOne({ name: "Tina" }, { $set: { salary: 42000 } });
```

// 9. Delete an employee from the Admin department

```
db.employee.deleteOne({ department: "Admin" });
```

// 10. Find employees whose name starts with 'N' using \$regex

```
db.employee.find({ name: { $regex: "^N", $options: "i" } });
```
