

Hospital Collection (MongoDB)

// 1. Insert documents

```
db.hospital.insertMany([
  { "_id": 1, "name": "Ramesh", "disease": "Fever", "age": 25, "city": "Pune", "bill": 3000 },
  { "_id": 2, "name": "Sita", "disease": "Cold", "age": 30, "city": "Mumbai", "bill": 2000 },
  { "_id": 3, "name": "Anita", "disease": "Fracture", "age": 40, "city": "Pune", "bill": 8000 },
  { "_id": 4, "name": "Vikas", "disease": "Migraine", "age": 35, "city": "Nashik", "bill": 4000 },
  { "_id": 5, "name": "Deepa", "disease": "Fever", "age": 28, "city": "Nagpur", "bill": 3500 }
]);
```

// 2. Display all patient records

```
db.hospital.find().pretty();
```

// 3. Find patients having disease = "Fever"

```
db.hospital.find({ disease: "Fever" });
```

// 4. Retrieve patients whose bill > 3000 using \$gt

```
db.hospital.find({ bill: { $gt: 3000 } });
```

// 5. Find patients from city "Pune" or "Mumbai" using \$or

```
db.hospital.find({ $or: [ { city: "Pune" }, { city: "Mumbai" } ] });
```

// 6. Display patients whose age is between 25 and 35 using \$and

```
db.hospital.find({ $and: [ { age: { $gte: 25 } }, { age: { $lte: 35 } } ] });
```

// 7. Find patients not suffering from "Cold" using \$ne

```
db.hospital.find({ disease: { $ne: "Cold" } });
```

// 8. Update bill of patient "Sita" to 2500

```
db.hospital.updateOne({ name: "Sita" }, { $set: { bill: 2500 } });
```

// 9. Delete a patient whose bill < 3000

```
db.hospital.deleteOne({ bill: { $lt: 3000 } });
```

// 10. Find patients whose names end with "a" using \$regex

```
db.hospital.find({ name: { $regex: "a$", $options: "i" } });
```
