

Library Collection (MongoDB)

// 1. Insert documents

```
db.library.insertMany([
  { "_id": 1, "title": "Database Systems", "author": "Navathe", "category": "Education", "price":
600, "issued": true },
  { "_id": 2, "title": "Python Programming", "author": "Mark Lutz", "category": "Education",
"price": 750, "issued": false },
  { "_id": 3, "title": "Digital Circuits", "author": "Morris Mano", "category": "Engineering", "price":
500, "issued": true },
  { "_id": 4, "title": "AI Basics", "author": "Russell", "category": "Technology", "price": 900,
"issued": false },
  { "_id": 5, "title": "SQL Cookbook", "author": "Alex", "category": "Education", "price": 800,
"issued": true }
]);
```

// 2. Display all books

```
db.library.find().pretty();
```

// 3. Find books where category = "Education"

```
db.library.find({ category: "Education" });
```

// 4. Find books with price > 600 using \$gt

```
db.library.find({ price: { $gt: 600 } });
```

// 5. Display books where issued = true

```
db.library.find({ issued: true });
```

```
// 6. Retrieve books having price between 600 and 900 using $and
db.library.find({ $and: [ { price: { $gte: 600 } }, { price: { $lte: 900 } } ] });
```

```
// 7. Find books whose category is not "Technology"
db.library.find({ category: { $ne: "Technology" } });
```

```
// 8. Update issued status of "AI Basics" to true
db.library.updateOne({ title: "AI Basics" }, { $set: { issued: true } });
```

```
// 9. Delete a book with price less than 600
db.library.deleteOne({ price: { $lt: 600 } });
```

```
// 10. Find all books whose title starts with "S" using $regex
db.library.find({ title: { $regex: "^S", $options: "i" } });
```
